

PRESSURE-SENSITIVE PAPER-PLASTIC FILM LAMINATE TAPE

ABSTRACT OF THE DISCLOSURE

5 A pressure-sensitive laminate for adhering to various items. The laminate includes a paper layer; a water-impermeable plastic film layer having a first corona-discharge treated surface which is adhesively laminated to the paper layer to form a paper-plastic film laminate having first and second opposed outer surfaces; and an exposed layer
10 of a pressure-sensitive adhesive coating on one of the first or second outer surfaces. The plastic film portion of the laminate has a strength sufficient to allow the film to be stripped in one piece from an item to which the laminate is adhered. The laminate may, if desired, additionally have a layer of a release agent upon an uncoated one of the first
15 and second opposed outer surfaces of the laminate. A preferred use for the laminate is as a pressure-sensitive tape product.
